DWS-4

Bird weighing scale

General

The DWS-4 is a bird weighing system which can be used for weighing hens/ cocks. The DWS-4 can be connected to an Orion or a Sirius-DWS computer. At any given time when a hen or a cock is on the weighing scale there is a pulling force on the loadcell, the loadcell converts this force into an electrical signal. The Sirius-DWS can process this signal directly, the Orion needs a LCA as an extra interface. With an optional KK-7P (junction box) it is possible to remove the bird weighing unit temporarily, for example, when cleaning out the house.

DWS-4

Bird weighing unit (hooks, chain, loadcell, weighing platform)
LCA (Loadcell amplifier box)

DWS-4-ZW

Bird weighing unit (hooks, chain, loadcell, weighing platform)
